This collection brings together global perspectives which critically examine the ways in which language as a resource is used and managed in myriad ways in various blue-collar workplace settings in today's globalized economy. In focusing on blue-collar work environments, the book sheds further light on the informal processes through which top down language policies take place in different multilingual settings and the resultant asymmetrical power relations which emerge among employees and employers in such settings. Taking into account the latest debates on poststructuralist theories of language, the

volume also extends its conceptualization of language to demonstrate the ways in which it extends to a wider range of multilingual and multimodal resources and communicative practices, all of which combine in unique and different ways toward constructing meaning in the workplace. The volume's unique focus on such workplaces also showcases domains of work which have generally until now been less visible within existing research on language in the workplace and the subsequent methodological challenges that arise from studying them. Integrating a range of theoretical and methodological approaches, along with empirical data from a diverse range of blue-collar workplaces, this book will be of particular interest to students and researchers in critical sociolinguistics, applied linguistics, sociology, and linguistic anthropology.

The geared locomotive is important in the history of logging. It mechanized the transport of logs from forest to mill. The Willamette is but a footnote with only 33 ever built. Its impact belies the small number; it brought innovations later copied by the big players: Shay and Heisler. A useful and worthy contribution to the history of rail and logging. This manual is one of a series of manuals for aviation and ground personnel who perform helicopter sling load missions ashore or aboard ship. These manuals are a coordinated effort of the US Army, US Marine Corps, US Navy, US Air Force, and US Coast Guard. All services participate in the sling load certification program begun by the Army in 1984. These manuals include standardized rigging procedures and other information from that program. Efforts were made to standardize ground crew and hookup procedures and terminology. The terms "helicopter" and "aircraft" refer to vertical lift aircraft that participate in sling load operations. Where service-unique requirements apply to an entire chapter or body of text, the service initials are at the beginning of the chapter or text. Otherwise the initials are at the end of the applicable sentence. The information in this manual will familiarize personnel with the sling sets, cargo nets, and other sling load equipment in the DOD inventory. It will also acquaint them with the helicopters used for sling load and provide basic procedures for rigging and hooking up loads. Rigging equipment and procedures described in this manual may not be authorized for all aircraft or services because of equipment or service restrictions. This manual does not provide details on aviation operations nor does it present detailed data that is normally contained in unit standing operating procedures (SOPs). Why buy a book you can download for free? We print the paperback book so you don't have to. First you gotta find a good clean (legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. It's much more

cost-effective to just order the bound paperback from Amazon.com This book includes original commentary which is copyright material. Note that government documents are in the public domain. State highway agency equipment fleet assets are vital to the delivery of agency programs, projects, and services. Measuring, monitoring, and reporting on asset utilization levels are necessary for the management of the equipment fleet and meeting the highway agency's business needs. The TRB National Cooperative Highway Research Program's NCHRP Research Report 957: Utilization Measurement and Management of Fleet Equipment is both a handbook on equipment utilization concepts and a guide for making cost-effective equipment

utilization decisions. The Utilization Prediction and Management Software allows the user to: Estimate equipment utilization and manage the fleet at a region-level based on available measurable information; Identify equipment that is under- or over-utilized, needs to be salvaged, or needs to be relocated; and Identify the fleet management strategy that minimizes the total fleet management costs.

Nursing and Informatics for the 21st Century Series is a critical resource in chronicling the huge historical shift in nursing linked to the explosion of EHR national and international strategies and health policies around the globe. Each book in the series examines the revolution that has occurred in nursing and explores the role IT continues to play in this transformation, with a thoughtful examination of nursing practice, science and research, and education. This book, Nursing Education and Digital Health Strategies explores the current state of health and healthcare education, as well as the current state of nursing informatics education. These topics include technologies-enabled education for all nurses and interprofessional collaborations from a worldwide perspective. The "New" learning for applied critical thinking will include technology, content, skills versus tools, and the use of "smart" systems for care delivery, the role of critical thinking and uniqueness of nursing care delivery. Further, how these changes are understood as a paradigm shift that needs to be incorporated along with nursing and healthcare education is emphasized. The effects of technology on human behavior are also explored, addressing human-factors interaction, interdependence of human computer interaction and other effects of technology on wellbeing. As part of nursing education, learning from clients/patients to better shape and advance nursing education and scholarship are discussed. Academic-clinical practice partnerships for a digital future, how teams are working together (clinician/teacher) for better healthcare delivery and applied knowledge, including joint appointments (exchange of academia and applied expertise), academic-applied human resources, and interprofessional learning/development are discussed. The book closes by discussing and

using case studies to showcase nursing competencies for the next decade, and implications for preparing the healthcare workforce for a digital world, faculty readiness and the interaction with gaming and simulations. Nursing informatics education, including continuing education beyond academia, i.e., informal education, worldwide is described as well as global challenges to support digital world capabilities. Hands-on Experiential Delivery (shifting from lecture-based delivery) - case studies learning-based exemplars are included.

This volume comprises select proceedings of the 7th International and 28th All India Manufacturing Technology, Design and Research conference 2018 (AIMTDR 2018). The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated. Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.
