Bringing the concepts of dimensional analysis, self-similarity, and fractal dimensions together in a logical and self-contained manner, this book reveals the close links between modern theoretical physics and applied mathematics. The author focuses on the classic applications of self-similar solutions within astrophysical systems, with some general theory of self-similar solutions, so as to provide a framework for researchers to apply the principles across all scientific disciplines. He discusses recent advances in theoretical techniques of scaling while presenting a uniform technique that encompasses these developments, as well as applications to almost any branch of quantitative science. The result is an invaluable reference for active scientists, featuring examples of dimensions and scaling in condensed matter physics,

astrophysics, fluid mechanics, and general relativity, as well as in mathematics and engineering. Through careful analysis of contemporary records in the engineering profession, the author shows how management invented itself and carved its own domain in the face of hostility and resistance from both manufacturers and workers. The book demonstrates how the new language and rhetoric of management emerged, and how it confronted and replaced the language of traditional capitalism: "system" instead of "individuals"; "jobs" instead of "natural rights"; "planning" instead of "free initiatives".

Recent agri-food studies, including commodity systems, the political economy of agriculture, regional development, and wider examinations of the rural dimension in economic geography and rural sociology have been confronted by three challenges. These can be summarized as: 'more than human' approaches to

economic life; a 'post-structural political economy' of food and agriculture; and calls for more 'enactive', performative research approaches. This volume describes the genealogy of such approaches, drawing on the reflective insights of more than five years of international engagement and research. It demonstrates the kinds of new work being generated under these approaches and provides a means for exploring how they should be all understood as part of the same broader need to review theory and methods in the study of food, agriculture, rural development and economic geography. This radical collective approach is elaborated as the Biological Economies approach. The authors break out from traditional categories of analysis, reconceptualising materialities, and reframing economic assemblages as biological economies, based on the notion of all research being enactive or performative.

This updated and extended edition of the book combines the topics provided in the two parts of the previous editions as well as new topics. It is a comprehensive compilation covering most areas in mathematical and theoretical physics. The book provides a collection of problems together with their detailed solutions which will prove to be valuable to students as well as to researchers in the fields of mathematics, physics, engineering and other sciences. Each chapter provides a short introduction with the relevant definitions and

notations. All relevant definitions are given. The topics range in difficulty from elementary to advanced. Almost all problems are solved in detail and most of the problems are self-contained. Stimulating supplementary problems are also provided in each chapter. Students can learn important principles and strategies required for problem solving. Teachers will also find this text useful as a supplement, since important concepts and techniques are developed in the problems. Introductory problems for both undergraduate and advanced undergraduate students are provided. More advanced problems together with their detailed solutions are collected, to meet the needs of graduate students and researchers. Problems included cover new fields in theoretical and mathematical physics such as tensor product, Lax representation, Bäcklund transformation, soliton equations, Hilbert space theory, uncertainty relation, entanglement, spin systems, Lie groups, Bose system, Fermi systems differential forms, Lie algebra valued differential forms, metric tensor fields, Hirota technique, Painlevé test, Bethe ansatz, Yang-Baxter relation, wavelets, gauge theory, differential geometry, string theory, chaos, fractals, complexity, ergodic theory, etc. A number of software implementations are also provided.

This is the fourteenth volume in the series of Memorial Tributes compiled by the National Academy of Engineering as a personal remembrance of the lives and outstanding achievements of its members and foreign associates. These volumes are intended to stand as an enduring record of the many contributions of engineers and engineering to the benefit of humankind. In most cases, the authors of the tributes are contemporaries or colleagues who had personal knowledge of the interests and the engineering accomplishments of the deceased. In the United States, some  
populations suffer from far  
greater disparities in health than  
others. Those disparities are  
caused not only by fundamental  
differences in health status  
across segments of the population,  
but also because of inequities in  
factors that impact health status,  
so-called determinants of health.  
Only part of an individual's  
health status depends on his or  
her behavior and choice; community-  
wide problems like poverty,  
unemployment, poor education,  
inadequate housing, poor public  
transportation, interpersonal  
violence, and decaying  
neighborhoods also contribute to  
health inequities, as well as the  
historic and ongoing interplay of  
structures, policies, and norms  
that shape lives. When these  
factors are not optimal in a  
community, it does not mean they  
are intractable: such inequities  
can be mitigated by social  
policies that can shape health in  
powerful ways. Communities in  
Action: Pathways to Health Equity  
seeks to delineate the causes of  
and the solutions to health  
inequities in the United States.  
This report focuses on what  
communities can do to promote  
health equity, what actions are  
needed by the many and varied  
stakeholders that are part of  
communities or support them, as  
well as the root causes and  
structural barriers that need to  
be overcome.

Pyroxenes

Announcement

Volume 7 of Reviews in Mineralogy reviews  
the essential aspects of pyroxene research.  
Recently, Deer, Howie and Zussman (DHZ)  
published a second edition of their volume in  
the Rock-Forming Minerals series, Single-  
Chain Silicates, Vol. 2A (John Wiley, New  
York, 1978). The present volume is intended  
to be complementary to DHZ and to provide  
material covered lightly or not at all in DHZ,  
such as electron microscopy, spectroscopy,  
and detailed thermodynamic treatments.  
However, because the range of pyroxene  
research has grown so much in recent years,  
there still are important areas not covered  
comprehensively in either of these volumes.  
Some of these areas are kinetics, diffusion,  
crystal defects, deformation, and nonsilicate  
pyroxene crystal chemistry. Because of these  
omissions and because this volume is  
intended for use with the MSA Short Course  
on Pyroxenes to be held at Emory University  
in conjunction with the November, 1980  
meeting of the Society, a Symposium on  
Pyroxenes was organized by J. Stephen  
Huebner for the meeting that is designed to  
present the latest research results on several  
different topics, including those above. With  
DHZ, this volume, and publications from the  
Symposium, the student of pyroxenes should  
be well-equipped to advance our knowledge  
of pyroxenes in the decades ahead.  
Bell Canada and the City of Hamilton are  
pleased to announce they will be moving  
forward together with a Bell investment of  
approximately \$400 million to expand  
broadband Internet access in urban and rural  
areas of Hamilton, the largest digital  
infrastructure investment in the City's history.  
Over the next five years, Bell and a Bell-

funded team of City of Hamilton staff will bring direct fibre network connections to more than 200,000 homes and business locations throughout the City with zero cost to taxpayers. The network will provide consumers with access to data speeds up to 1.5 gigabits per second, the fastest home Internet speeds in Canada. Working in partnership with the Hamilton Chamber of Commerce's Digital Infrastructure Task Force, gaps in digital infrastructure across the community were identified. Subsequently, the City worked to increase investment in digital infrastructure to address the gaps. As part of the plan to enhance Hamilton's standing as a Digital City, Mayor Eisenberger requested that broadband speeds be enhanced for all of urban Hamilton, business parks and major commercial areas, and rural areas in the community. In addition to premium network support for the City's business community, the Bell project includes the expansion of high-speed Bell Wireless Home Internet service to 8,000 homes in rural Hamilton. This innovative 5G capable technology delivered over Bell's advanced LTE wireless network provides broadband residential Internet access for small towns, farming communities and other less populated locations. Bell will work in close cooperation with the City and local contractors, including Aecon, Telecon and Sentrex, to employ innovative techniques to minimize disruption to residents and businesses throughout the project. The majority of the network build will consist of new fibre installed underground, with additional fibre located on Bell, Hydro One and Alectra Utilities poles.

In a part of North Africa where, within miles, the backdrop can change dramatically from snow-blasted mountains to wind-scoured dunes live the Berber people of the Atlas Mountains. In the third book of her trilogy on African women, world-renowned photojournalist Margaret Courtney-Clarke examines the difficult lives and remarkable arts of Berber women. As modern times and modern warfare in Algeria, Morocco, and Tunisia have encroached on their centuries-old traditions, Berber women have begun to give up the old ways. *Imazighen: The Vanishing Traditions of Berber Women* is a record of a quickly disappearing way of life. As in her earlier books, *Ndebele: The Art of an African Tribe* and *African Canvas: The Art of West African Women*, Courtney-Clarke

succeeds in capturing the spirit of the women by experiencing their world from season to season and by respecting their values and traditions. Through photographs, interviews, and observations, Courtney-Clarke documents the Berber women as they stoically carry water and firewood on their backs for miles of rocky terrain. And she records the beauty they have magically produced in their lives - through their spinning and weaving and their carefully coiled pottery - a metaphor for survival and creativity. Geraldine Brooks, award-winning journalist and an expert on life in the Middle East, accompanied Courtney-Clarke on her last trip to North Africa, and has written moving, thoughtful essays on the struggle of existence among the Berbers. With a glossary of Berber terms and a detailed map of the region, this book is not only a handsomely illustrated volume of the triumph of the arts of the Berber women, but a dramatic record of a people yielding to the pressures of the twentieth century.

A remarkable tale of greed, treachery and deceit in one of the most outlandish criminal stunts ever conceived: the theft of a nation. In 1981, a small but heavily armed force of misfits from Canada and the United States set off on a preposterous mission: invade an impoverished Caribbean country, overthrow its government in a coup d'etat, install a puppet prime minister and transform the island into a crooks' paradise. Their leader was a Texas soldier of fortune named Mike Perdue. His lieutenant was a Canadian Nazi named Wolfgang Droege. Their destination: Dominica. For two years, they recruited fighting men, wooed investors, stockpiled weapons and forged links with the mob, leftist revolutionaries and militant Rastafarians. They called their invasion Operation Red Dog, and they were going to make millions. All that

stood in their way were two federal agents from New Orleans on the biggest case of their lives. Set in the Caribbean, Canada and the American South at the end of the Cold War, and based on hundreds of pages of declassified U.S. government documents, as well as exclusive interviews with those involved, Bayou of Pigs tells the true story of Canadian and American men who tried to steal a tropical paradise.
