With amazing low-light capabilities, incredible definition, intelligent autofocus and a host of other features, digital cameras have now become so powerful that they have left their users behind. Most photographers can take competent shots in a range of conditions, or fix imperfect exposures in Photoshop or Lightroom, but very few have the skill to push their cameras to the limit and capture the perfect shot, under all conditions, with no post-processing required. In Camera is the perfect way to take your photography to that level; to master your camera, understand light, exposure and composition, and make amazing photographs, whatever your camera, without cheating after the event. One hundred of Gordon's beautiful photos are given with his own expert commentary; full settings and camera details are included, and a host of tips and tricks let photographers of any level learn something from every example. The shots are taken with a wide range of cameras, and the emphasis is on getting results by improving your own skills, not wasting money on expensive equipment.

The distinguished photographer shares his experiences and details the circumstances, methods, and technical and aesthetic problems surrounding the creation of forty of his most famous photographs

One of the most dynamic writers and one of the most respected scientists in the field of climate change offer the first concise guide to both the problems and the solutions of global warming. Guiding us past a blizzard of information and misinformation, Gabrielle Walker and Sir David King explain the science of warming, the most cutting-edge technological solutions from small to large, and the national and international politics that will affect our efforts. While there have been many other books about the problem of global warming, none has addressed what we can and should do about it so clearly and persuasively, with no spin, no agenda, and no exaggeration. Neither Walker nor King is an activist or politician, and theirs is not a generic green call to arms. Instead they propose specific ideas to fix a very specific problem. Most important, they offer hope: This is a serious issue, perhaps the most serious that humanity has ever faced. But we can still do something about it. And they'll show us how.

One of the twentieth century's finest engravers, Lynd Ward created remarkable woodcuts that resonate in both the heart and the imagination. His dramatic images present complete, self-contained narratives in both of these wordless tales. Prelude to a Million Years unfolds against the backdrop of the Great Depression, portraying in thirty illustrations a sculptor's struggles in an industrial society. Song Without Words explores one woman's emotional journey through pregnancy and childbirth in a series of twenty-one images described by the author as "a kind of prose poem." Ward's memorable works have been honored with such prestigious awards as the Library of Congress Award, the National Academy of Design Print Award, the New York Times Best Illustrated Award, the Caldecott Medal, and the Regina Award. An introduction by woodcut historian David A. Beronä places these stories within the context of Ward's career and the graphic arts world of the 1930s.

Documenting theatrical and stage events under the often dramatic lighting designed for the production provides a number of specific photographic challenges, and is unlike most every other branch of photography. Theatre & Stage Photography provides an overview of basic photography as it applies to "available-light" situations, and will move both basic and experienced photographers through the process of accurately capturing both the production process and the resultant performance.
