Diabetes Type 2 Treatment Guidelines
This guideline covers the care and management of type 2 diabetes in adults (aged 18 and over). It focuses on patient education, dietary advice, managing cardiovascular risk, managing blood glucose levels, and identifying and managing long-term complications. In August 2019, we removed the recommendations on diagnosing and managing high blood pressure.

Overview | Type 2 diabetes in adults: management ...

This guideline offers best practice advice on the care of adults with type 2 diabetes. When caring for older adults with type 2 diabetes, particular consideration should be given to their broader health and social care needs. Older people are more likely to have co-existing conditions and to be on a greater number of medicines.

Type 2 diabetes in adults: management
Type 2 diabetes can be treated by a number of different methods, ranging from lifestyle adjustments to tablet medication and injections, through to bariatric (weight loss) surgery. Lifestyle changes are advised for everyone with type 2 diabetes; your doctor will recommend treatment alongside these changes if your blood glucose levels are too high.
