The larger, 114 cubic-inch-engine features liquid-cooled cylinder heads for the CVO Street Glide and CVO Limited models. Harley-Davidson will launch the new engines that will be featured in the 2017 model year touring motorcycle lineup through a virtual tour of the motorcycle factory on Facebook Live, which will be a first for the company.

This system is very similar to an automotive cooling system. It consists of two radiators, located in the motorcycle's right and left side lower fairings. It has fans, a thermostat, expansion tank, pressure cap, a pump and input/output hoses. The cooling system pumps coolant around the motor's exhaust valves, helping the engine to run cooler or not overheat.

Both new engines are 60-degree V-Twins, liquid cooled and with internal balancing. The V-Twin configuration provides a link to the Harley-Davidson heritage that has seen the V-Twin engine as the primary power source for bikes since 1911, often with the engine as a highlighted design element.

[Revolution Max engine - Harley-Davidson](#)

-In this system, the engine will be cooled because of the evaporation of the water in the cylinder jackets into steams. -The advantage is being taken from the high latent heat of vaporization of water by allowing it to evaporate in the cylinder jackets. This system is used for cooling of many types of industrial engines.

Water Cooling System in Engine | types of water cooling system

When Harley launched the 2014 model range this week they introduced a new Twin-Cooled 103 and 110 engine to the range. By Twin-Cooled they mean that water and coolant is used to cool the heads near the exhaust ports where most of the heat is generated. It seems this has largely been done for rider comfort and to pass tough new emissions laws. It doesn't mean Harley has gone water cooled like they did with the V-Rod, much to the chagrin of many devotees.

Harley Twin-Cooling explained - Motorbike Writer

The Twin-Cooled Milwaukee-Eight 107 is the same displacement, but has liquid cooling for the heads. At the top of the line is the Twin-Cooled Milwaukee-Eight 114, which has liquid-cooled cylinder...

2017 Harley-Davidson Milwaukee-Eight Engines | 11 Fast Facts

With extreme ease of access and the simplicity of the procedure, Harley has made it an easy transition to liquid cooling its power plant. Not only is it a snap to check/add coolant to these bikes, Harley has done an excellent job of hiding the fact that there is a cooling system on the bike.

Keeping Your Liquid-Cooled Harley... Cool! | Baggers

Liquid-cooled engines are mostly used to reduce heat and improve performance. It's the number one reason you see these engines on sports bikes. On most cruisers like Harley, air-cooled engines are practical because these bikes run on less RPM, dissipating less heat. In fact, it's also easier to maintain an air-cooled engine.

Complete Engines for Harley-Davidson for sale | eBay

The Harley-Davidson Milwaukee-Eight engine is the ninth generation of "big twin" engines developed by the company, but only Harley's third all-new Big Twin in 80 years, first introduced in 2016. These engines differ from the traditional Harley Big Twin engines in that there are four valves per cylinder, totaling eight valves, hence the name.

Harley-Davidson Milwaukee-Eight engine - Wikipedia

Hd Water Cooled Engine Some people might assume that the term "liquid-cooled" refers to a full-blown, water-cooled engine, but Harley's so-called Twin-Cooled power plants use both oil and water for thermal relief, applying coolant only to the cylinder heads (which leaves the engine block cooled by oil and air),
