The correct form for the part of the expansion containing the doubly repeated root is therefore $(Bx+C)/(x-2)^2$. Using this form and either of methods (i) and (ii) for determining the constants gives the full partial fraction expansion as $x-4(x+1)(x-2)^2 = -5/9(x+1) + 5x-16/9(x-2)^2$. as the reader may verify.
