successful unit to keep your production on schedule and on budget. The idea of telematics appeared more than a decade ago and it is possible to define it, in a general and simple way, as a communication system for collecting, processing and distributing information. The transport services market is definitely the most important area for telematic applications. Transport-telematics issues constitute a field of knowledge of transport that integrates information technology and telecommunications in applications for managing and controlling traffic in transport systems, stimulating technical and organizational activities that ensure improved effectiveness and safe operation of such systems. Integrated and cooperating telematic applications constitute intelligent transport systems. The basis of such systems is to efficiently collect and process information and to manage its flow within the system. This enables supplying information from almost all areas of transport activities in real time. Intelligent transport—supported by a number of integrated telecommunications, IT measurement and control engineering solutions, and by appropriate tools and software—comprises telematic applications. They have an extensive range of use in many areas of transport, allowing the integration of the means and types of transport, including its infrastructure, business organization and management processes. This monograph is a collection of selected papers presented at the jubilee transport telematics conference, TST 2010, and is the result of the work of many scientists associated with this area of knowledge and who had spent years with the conference.

Multimedia Systems discusses the basic characteristics of multimedia operating systems, networking and communication, and multimedia middleware systems. The overall goal of the book is to provide a broad understanding of multimedia systems and applications in an integrated manner: a multimedia application and its user interface must be developed in an integrated fashion with underlying multimedia middleware, operating systems, networks, security, and multimedia devices. Fundamental characteristics of multimedia operating and distributed communication systems are presented, especially scheduling algorithms and other OS supporting approaches for multimedia applications with soft-real-time deadlines, multimedia file systems and servers with their decision algorithms for data placement, scheduling and buffer management, multimedia communication, transport, and streaming protocols, services with their error control, congestion control and other Quality of Service aware and adaptive algorithms, synchronization services with their skew control methods, and group communication with their group coordinating algorithms and other distributed services.

Kiss My Genders celebrates the work of more than 20 international artists whose practices explore and engage with gender fluidity, as well as non-binary, trans and intersex identities. Featuring works from the late 1960s and early 1970s through to the present, and focusing on artists who draw on their own

experiences to create content and forms that challenge accepted or stable definitions of gender. Working across painting, immersive installations, sculpture, text, photography and film, many of these artists treat the body as a sculpture, and in doing so open up new possibilities for gender, beauty, and representations of the human form. This publication includes texts from writers, theorists, curators, poets and artists who have made key contributions to thinking in the field. From pop culture and gender dissidence to the embrace of the 'monstrous' or 'freaky', from the politics of prose to trans-feminism and politics on the street, each of these writers throws light on a different way of seeing. Also featured is a round-table discussion between a selection of artists and exhibition curator Vincent Honoré. In addition to these original texts, the book reprints a key text by Renate Lorenz and includes poetry by Travis Alabanza, Jay Bernard and Nat Raha. Published on the occasion of the exhibition, Kiss My Genders at Hayward Gallery, London (12 June - 8 September 2019).

This book examines the regulatory framework, regulatory objectives, regulatory logics, regulatory instruments, regulatory failures, and regulatory responses in China's financial market after the global financial crisis. The book provides an in-depth analysis of China's contemporary financial regulatory system, focusing on risks, regulation, and policies in practice. By drawing on public and private interest

theories relating to financial regulation, the book contends that the controlled development of the banking sector, and the financial sector generally, has transformed China's banks into more market-oriented institutions and increased public sector growth. However, China's financial market and financial regulation have some inherent weaknesses and deficiencies. This book also offers insights into how this can be improved or adapted to minimize systemic risks in China's financial sector. This book tries to prove that financial regulation is not just a vehicle for maintaining efficient financial markets but a primary tool through which the Chinese government achieves its political and economic objectives. More fundamentally, according to the law and finance theory, strong market and vibrant judicial systems are needed to further modernize China's financial markets and market economy. The book will be a useful reference for anyone interested in learning from the Chinese experience.

Multiculturalism is a concept that has been stretched to include a variety of political conditions, mainly in countries that have liberal democratic political systems and

traditions. In this North/South 'comparison' we illuminate remedies pursued by governments and various political interests to address the binary. Tensions of culture and rights may not be the same everywhere. An interesting point of comparison is in the treatment of liberalism - often assumed in the global North to be the universal norms to be defended, whereas in the global South, liberalism itself may be viewed as the problem. Colonial histories are fraught with discriminatory legislation aimed at accommodating indigenous populations, often a trade-off for more structural redistributive justice through, for example, land reform. In Africa, for example, the codification of customary law has reinforced misogynistic and static interpretations of 'African culture'. This book will show how varied and complex the embodiment of multiculturalism as a political practice, or policy discourse in different political contexts can be, and how often the outcome of multicultural discourses creates a binary between culture and universal human rights. The aim of this book is to grapple with dislodging this binary. This book was published as a special issue of *Politikon*.

In keeping with this emphasis on conceptual understanding, each exercise set begins with concept questions and each end-of-chapter review section includes fill-in-the-blank questions which help students

master the definitions and theorems in each chapter.

Additionally, many questions asking for the interpretation of graphical, numerical, and algebraic results are included among both the examples and the exercise sets. Recording Spaces deals with the acoustics of rooms intended for musical performance of many styles. It discusses these spaces in terms of isolation, internal acoustics, possible techniques of use, and the way that these spaces will interact with the musicians, their instruments, and the microphones. It deals with the concepts of sound isolation, examines some of the principal processes at work, and provides drawings and descriptions of actual rooms and techniques. The

book describes how the isolation requirements have their effect on the internal acoustics of the rooms, and how the room treatments must be conceived with such interactions taken into consideration. Starting from the initial concepts, to the measurements of the finished items, Recording Spaces discusses many different types of room, from vocal 'booths' to orchestral rooms. There are many stories of how actual 'classical' musical performances, from rock to orchestral, have been inspired, or strongly influenced, by the acoustics of their recording spaces. Philip Newell lives in Spain and travels extensively - he is currently designing a concert hall in the Ukraine. Philip began his career working with classic groups such as The Who, whilst at the same time recording brass bands, Welsh male voice choirs, Scottish pipes, church and fairground organs, musicals, and classical recitals. After setting up Virgin Records' first studio he designed their Manor Mobile studio, produced the first recording with a 24-track mobile vehicle, and went on to design their Townhouse Studios in London. Philip has close links with the Institute of Sound and Vibration Research at Southampton University and has written articles for the major audio magazines. He is the author of Studio Monitoring Design, also published by Focal Press.
