Given the heightened focus on the opioid crisis and its intersection with adequate chronic pain management, there is an impetus to shift patient care toward self-management and comprehensive interdisciplinary modalities. However, despite the evidence base for efficacy, pain psychology remains largely relegated to the complementary and alternative medicine designations and medical providers struggle to search for trained pain psychologists in their community. This unique book makes core psychological techniques accessible to medical providers and allied health professionals who are on the front lines of routine communication with patients living with chronic pain. Practical suggestions and vignettes demonstrate how to briefly and effectively incorporate key concepts from Cognitive-Behavioral Therapy, Acceptance and Commitment Therapy, Motivational Interviewing and other orientations into any health care setting.

They swear they only kidnapped me for my own protection, and after a terrifying attack by one of their enemies, I'm starting to believe them. There's a treaty between us and them; mere mortals and the ones who terrify but keep us safe. The contract demands that every year there's an offering and this year I'll walk across that stage presenting myself. We have no idea what to expect if they choose someone, since they haven't done so in generations. The only thing we know is that the ones they take belong to them forevermore. If chosen, you don't come back, or so the story of the treaty goes. Gather and present yourself. This is the offering and I . . . belong to him.

This book considers the influence that sixteenth-century and early seventeenth-century mathematical thinking exerted on the writing and production of popular drama between about 1587 and 1603. It concentrates upon six plays by five early modern dramatists: Tamburlaine, Part 1 (1587) and Tamburlaine, Part 2 (1587) by Christopher Marlowe; Friar Bacon and Friar Bungay (1589) by Robert Greene; Old Fortunatus (1599) by Thomas Dekker; Hamlet (1600) by William Shakespeare; and The Tragedy of Hoffman (1603) by Henry Chettle. Each chapter analyses how the terms, concepts, and implications of contemporary mathematics impacted upon these plays' vocabularies, forms, and aesthetic and dramaturgical effects and affects.

"Between 1921 and 1933, Otto Dix (1891-1969) created many portraits of his lover and later wife, Martha. Representative paintings, watercolors, drawings, and humorous sketches show Martha Dix in various roles: as a sophisticated, emancipated woman; as muse and intellectual companion; as mother and center point of the family. The painter's different attitudes toward his model, which range from admiration to intimacy to increasing distance, are transposed into a multiplicity of different types of portraits. The titles of the works, from emotionally charged to matter-of-fact description, underscore this impression. Martha's portraits show more than just the art of Otto Dix in its many facets. They also reflect the urban flair, fashion, music, dance, and traditional and new gender roles in the 1920s."--BOOK JACKET.

Panders and Their White Slaves

The progressive financial deregulation, following the abolishment of the Bretton Woods system in the early 1970s, changed the use and the configuration of technologies in the organizational contexts of finance. Information systems and financial engineering have led to an unprecedented reinvention of the business of banking. Written by experts from the social studies of finance, information systems specialists and historians and sociologists of technology, this book explains why the management and the regulation of financial organizations, especially in periods of crises with systemic consequences, requires an understanding of the complex techno-organizational landscapes which emerged from this evolution. It shows the interconnection between the difficulty of overcoming the financial and operational risks we are facing and the global webs of organizational and technological complexity.
