This book presents the research that resulted from a fruitful collaboration between many CNRS research laboratories, health establishments and industrialists. This research contributes to the study and the development of logistical systems, in particular health-oriented logistical systems, in order to manage and optimize physical, informational and financial flows. The authors examine optimization and modeling methods to facilitate decision support for the management of logistics systems in the health field, including solutions to problems encountered in the management of logistics flows and the study of systems incorporating these flows. In the first chapter, logistics engineering is presented whilst the second chapter introduces the study of real cases of transport, management crisis and warehouse management logistics systems. The third chapter is devoted to the study of hospital systems and emergency services and in the fourth chapter, the authors highlight the operational aspect of the hospital system thanks to an innovative modeling approach. Finally, mathematical and algorithmic models of scheduling, and dynamic orchestration of the collaborative workflow by a multi-agent system, are introduced. Presents innovative optimization and modeling methods to provide decision support for the management of logistics systems Provides guidance to healthcare and hospital workers who must control the flow of process issues (i.e. patient information, products, equipment) and the restructuring that results internally in the pooling of resources, especially technical platforms Includes answers to problems encountered in the management of logistics flows and the study of systems incorporating these flows Addresses the challenges of quality and speed in an innovative approach to organizational, economic, technological, and informational optimization

At a glossy gathering on Paradise Island, record exec Eva Glenn—soulful, sexy, powerful, and perhaps pregnant—is hosting a comeback showcase for singing sensation Sunny Addison, a barefoot diva with a poet's heart and the voice of a lion. At the event's high-strung peak, however, Eva begins to sink beneath the waves of anxiety washing over her—anxiety over a confusing sexual triangle, a career at a crossroads, and choices to be made about her possible pregnancy—and decides, in a blink, to flee. She leaves Paradise for the petite, pastoral island of Cat, accompanied by her sometime-lover D'Artagnan Addison, an earnestly crazy mystic looking for answers of his own. What begins as an idyllic break quickly turns into an intense sojourn that brings Eva to terms with the crises closing in on her.

This book covers the most recent advances in the field of evolutionary multiobjective optimization. With the aim of drawing the attention of up-and coming scientists towards exciting prospects at the forefront of computational intelligence, the authors have made an effort to ensure that the ideas conveyed herein are accessible to the widest audience. The book begins with a summary of the basic concepts in multi-objective optimization. This is followed by brief discussions on various algorithms that have been proposed over the years for solving such problems, ranging from

classical (mathematical) approaches to sophisticated evolutionary ones that are capable of seamlessly tackling practical challenges such as non-convexity, multi-modality, the presence of multiple constraints, etc. Thereafter, some of the key emerging aspects that are likely to shape future research directions in the field are presented. These include: optimization in dynamic environments, multi-objective bilevel programming, handling high dimensionality under many objectives, and evolutionary multitasking. In addition to theory and methodology, this book describes several real-world applications from various domains, which will expose the readers to the versatility of evolutionary multi-objective optimization.
